Examen de Fin de Formation

Session Juin 2014

Epreuve : Communication en Anglais

Niveau : T

Durée : 1h30mn.

V1

Barème : / 20

Before the invention of the wheel, one group of early man would remain isolated from other communities. They could move only in a walking distance area. The invention of wheel had changed the early man's life entirely. His social region had also expanded with time. As time passed by, early man changed to a civilized person and refined the design of wheels. Earlier, it was made with wood but nowadays, rubber and steel are used to make better wheels and we have also improved better Means of Transport now. Bullock carts and pony of earlier time are now replaced by buses, cars, scooter, cycle etc. Earlier, man could only ride on horses, elephant, camel, bullock cart and handmade boats but we can also travel in air and space now.

Our conveyances are also known as vehicle as well as Means of transport. Now, we have new and very fast means of transport. Today, we can go almost any place in the world. The means of transport have made our world a very small and common place to live in. Rocket and satellite made it possible to go beyond our atmosphere and travel around the earth; in space. Human has put his step on heavenly bodies and moon also. We have even sent rover (a robot) on planet Mars, by using a very advanced satellite. Making of international space station has also become possible with the use of advanced satellites.

I. COMPREHENSION

A. Answer the following questions from text 4/4

1. What is the material from which the first wheel was made?
2. What can we do now?
